

Selecon Rama HP Fresnel available from Point Source Productions

Point Source Productions has recently invested in a number of Selecon RAMA High Performance fresnels, to simultaneously expand our hire stock whilst continuing to offer our clients the most innovative new products on the market.

We feel the Selecon Rama HP has a number of special features which give it the edge over similar products.

The large 175mm lens ensures a high ratio of light output for the wattage – Selecon claim there is a 50% increase over standard 150mm lens units. Beam angles range from 7°- 56° with a flat, even spread of light.

The swingdown door allows easy access to the lamp whilst the microswitch automatically disconnects power on opening – invaluable for schools and amateur markets where inexperienced technicians could be using them.

The adjustable yoke's fulcrum can be adjusted anywhere along the length of the lantern to perfect the balance point at whatever angle it is positioned and regardless of the number of accessories on the front.

The fixture seems kinder to gels whilst its heat-insulated rear grab-handle (which doubles as handy storage for the 1m cable length) and plastic front and back ends ensure the unit remains cool during operation and focus.

“The integrated safety bond ticks all the boxes as far as health and safety are concerned,” says Hire Manager, Ian King. “People can be sloppy when applying safety bonds but the bond on the Rama is very easy to use – it just needs to be loosened for focussing, and most importantly, tightened again for safety. The fact that it is encapsulated means it cannot be mislaid – which is great for hire companies.”

“Shock loading capacity is also frequently taken for granted but the RAMA bond is the correct length for its size with a certified rating so you are confident it will do the job.”

“We believe the Selecon Rama truly matches functionality with useability and is a product worth investing in,” adds MD, Stephen Capel, “Our new units have been kept busy on corporate and theatrical events from day one.”
